

My Dog's Vaccination Record

Name: _____

Breed: _____

Birthday: ____ / ____ / ____

Vaccine	Disease	Immunization Dates								Veterinarian
Core Vaccines: Recommended at one- to three-year intervals for most dogs.										
Canine Distemper	Severe multisystemic disease.									
Canine Parvovirus	A deadly viral disease causing gastrointestinal tract damage and dehydration.									
Canine adenovirus-2	Highly contagious virus seen in combination with other agents that cause upper respiratory infections.									
Rabies	A fatal virus that affects the brain and spinal cord.									
Non-Core Vaccines: Recommended on an as-needed basis.										
Parainfluenza Virus	Viral disease much less severe than distemper. A type of kennel cough.									
Bordetella	Bacterial illness commonly referred to as "kennel cough."									
Lyme Disease	Also known as <i>Borrelia burgorferi</i> . Can cause acute arthritis, sometimes lameness. Spread through tick bites.									
Leptospirosis	Bacteria causing acute infection that can lead to kidney or liver disease.
